PROFILE SUMMARY

Backend-focused Full Stack Java Developer with 1.3 years of experience building scalable web applications using Java, Spring Boot, and React. Experienced in designing and developing secure RESTful APIs and microservices that support business workflows including authentication and third party integrations. Skilled in database operations, debugging production issues and configuration management across distributed services. Hands-on experience with Git-based development, agile methodologies, and collaboration with DevOps teams to deliver reliable software solutions. Passionate about building efficient backend systems while contributing to modern React-based frontend applications.

EXPERIENCE

Software Engineer

Config Server LLP – April 2025 – present

- Worked on backend services in a microservice-based application supporting daily business workflows and internal operations.
- Designed and maintained RESTful APIs using Spring Boot, consumed by web applications and internal services.
- Implemented Spring Security with JWT-based authentication to secure application endpoints.
- Developed and maintained unit tests using JUnit to ensure reliability of core backend services.
- Performed database operations and debugging across services to resolve functional and integration issues.
- Collaborated with the frontend team during integration testing and assisted in fixing minor ReactJS UI issues.
- Followed Git-based version control and agile development practices while coordinating with cross-functional teams.

Software Engineer Trainee

Config Server LLP – Jan 2025 to March 2025

- Assisted in developing RESTful services and microservices-based features.
 - Supported debugging and issue resolution under senior developer guidance.
 - Gained hands-on exposure to agile methodology (sprint planning, stand-ups).
 - Learned and implemented version control (Git/GitHub/BitBucket) and DevOps workflows, including code deployment and environment configuration.
 - Assisted in API testing and validation using tools like Postman, ensuring endpoints responded correctly during development.
 - Supported database-related tasks such as writing basic SQL queries and verifying data during feature development and debugging.
-

EDUCATION

B.Sc. in Computer Science

Tulsi College of Computer Science and Information Technology, BEED – July 2022 – May 2025

Percentage – 83.8%

TECHNICAL SKILL

Category	Technologies/Tools
Development	Java 17, Spring MVC, Spring Data JPA, Spring Boot, REST API, Maven, Tomcat
Frontend Development	React, HTML5, CSS3, JavaScript
Version Control	Git, GitHub, BitBucket
Database	PostgreSQL, MySQL
Unit Testing & Code Coverage	Junit, Mockito, JaCoCo, SonarQube
Methodology	Agile
Operating System	Windows, Linux
Tools	IntelliJ, Visual Studio Code, Eclipse, MySQL workbench

PROJECTS

Project Title	MediMart
Duration	Feb 2025 – Nov 2025
Description	Developed a specialized web-based e-commerce platform dedicated to healthcare products, enabling efficient browsing, management, and secure transactions for medical supplies and equipment.
Tech Stack	Java 8, Spring Boot, Spring MVC, JPA (Hibernate), REST APIs, PostgreSQL, ReactJs, Git
Role	- Developed microservices architecture where product, cart, order and user modules implemented as independent services enabling scalability and maintainability. - Integrated PostgreSQL with Spring Data JPA for data persistence. - Created dynamic UI using React and Spring MVC. - Ensured code quality with unit testing and Git-based version control.

Project Title	AutoQA – Config-Driven Test Automation Framework
Duration	Dec 2025 – Present
Description	Developed a Java Spring Boot–based Selenium automation framework enabling QA teams to run data-driven test cases from Excel/CSV without code changes. Implemented environment-based execution through centralized configuration for multiple deployments. Built a dynamic execution engine with Excel reporting to track results and support faster defect analysis.
Tech Stack	Java, Spring Boot, Selenium WebDriver, Apache POI, Maven, TestNG/JUnit, Excel/CSV (Data-Driven Testing), Git
Role	- Designed and built a Java Spring Boot–based Selenium automation framework enabling QA teams to execute test cases defined in Excel and CSV without code changes. - Implemented environment-aware execution (DEV, UAT, CIT, etc.) using centralized configuration in application.properties, allowing seamless testing across multiple deployments. - Developed a data-driven execution engine that interprets actions, locators, and test data from external files dynamically drive application workflows. - Generated detailed Excel-based execution reports, capturing pass/fail status, validation errors, and XPath resolution issues to accelerate defect analysis.

CERTIFICATIONS

- Oracle Cloud Infrastructure Classic 2025 Certified Associate Architect.
- Full Stack Java Course – Seed InfoTech

ACHIEVEMENTS

- Recognized with the “**Rising Star Award**” for high performance, rapid learning, and impactful contributions to production systems.
- Strong analytical and debugging skills with a focus on scalable and maintainable solutions.
- Comfortable working across backend services and frontend integration layers in fast-paced agile environments.
